WHO WE R

We offer a unique approach to innovative construction solutions. The combination of venturousness and knowledge is a good description for the essence of our company, then the colors were taken it's not at all what it seems. We specialize in building ~~houses~~ homes using block formes and small architectural forms. 3D printing technology helps to reduce the deadlines for creating truly high-quality structures.

You're buying for efficiency.

FUTURE IS HERE

Our printer operates at speeds of up to 0.5 meters per minute, which means that your home, from the first shovel in the ground to the key in your home, will take just 2 months! Moreover, the quality is exceptional, surpassing that of aerated concrete, modular, and frame construction. Choose the technology of block printing with a 3D construction printer instead of traditional building methods. What's more, our unique reinforcement technology will make your building as durable as traditional brick construction.
Quality, speed, and affordability - that's 3b.

[LEARN MORE](#)

the Material

- certified ready mixes
- cheap mixes of own development
- experimental mixes based on heavy industry waste (project Resluge)
- the possibility of developing material on demand
- the consumer can choose the texture, color, pattern, base of materials from our materials laboratory.

for example: the material "Resluge", which was developed by our laboratory, consists of 92 percent of heavy industry waste, using it we reduce the number of toxic red sludge landfills. The project to produce this material has now received a lot of support from grant programs

and more than 15 different materials

house Home 1f

Business class high-tech home - is that ur dream place? We care about you from the project beginning till the very end! We r not selling houses, we r together investing in ur dream home.

More Information ...

let's create an advantage for your business!

We represent the future of construction. By choosing us, you are not only gaining cutting-edge technology for your construction needs but also supporting a Ukrainian startup with ambitious plans to become a renowned global brand. Together, we are building a brighter future for Ukraine. Choose us, and together we will convert your wildest construction dreams into reality.

More Information ...

cheap & quick solutions.

What're our advantages - high-quality and simultaneously cheap & quick solutions. For example, our thrifty materials cost around \$30 per m2 compared to \$70 average traditional building cost.
